

## Paper Reading Questions

For each paper, your assignment is two-fold. By 10PM the evening before lecture:

- Submit your answer for each lecture's paper question via the submission web site in a file named `lecn.txt`, and
- Submit your own question about the paper (e.g., what you find most confusing about the paper or the paper's general context/problem) in a file named `sqn.txt`. You cannot use the question below. To the extent possible, during lecture we will try to answer questions submitted the evening before.

### Lecture 17

Based on the different schemes described in the paper, what do you think would be a reasonable choice for authenticating users in the following scenarios, and what trade-offs would you have to make:

1. Logging in to a public Athena machine in a cluster.
2. Checking your balance on a bank's web site via HTTPS from a private laptop.
3. Accessing Facebook from an Internet cafe.
4. Withdrawing cash from an ATM.
