

Moving Data to Matlab

Here is the easiest way to move data such as a table to matlab. First, put it in a file in ASCII, like

```
1 10
2 25
3     30
4 25
5 -6
```

Let's say that this file is called `dans.dat`. To load this data into a variable in matlab, you would type (in matlab)

```
>> Table = load('dans.dat');
```

Let's now take a look:

```
>> T
```

```
T =
```

```
1    10
2    25
3    30
4    25
5    -6
```

Now, you can do all your plotting in Matlab, whatever program you use!
