15.568 – Practical Information Technology Management – Spring 2005

Class 14: Project Discussion
Tuesday March 29, 2005

Visitor: Steve Winig

The purpose of this class is to engage in discussion of the projects in order to learn from each other the content, direction and issues going forward, to provide helpful suggestions, and to heighten the ultimate quality and value of the projects.

Read and be familiar with the project plans and first status reports (with instructor feedback comments) of every project. The projects will be made available on MIT Server.

Come to class prepared to present in an informal way the purpose, approach, status and next steps of your project. Discussion of each project should take approximately 20 min. A few slides to introduce the project and lead the discussion will be sufficient. Also be prepared to comment on and ask questions about the other two teams' projects.

Steve Winig, our overall liaison from IS&T, will join us for the class, but the specific project champions will not.
